**Product Description**

Human Peripheral Blood Mononuclear Cells are isolated from whole peripheral blood (anticoagulant: EDTA) using a density gradient. Cells were obtained using Institutional Review Board (IRB) approved consent forms and protocols.

**Cryopreservation**

Cryopreserved products allow for prolonged storage before use. Cell products contain 10% DMSO to minimize cell death during freezing. All cryopreserved products are stored in containers designed and tested for ultra-low temperatures at long time intervals. We normally ship cryopreserved items on dry ice, but can also use a cryoshipper at the customer’s request.

**Sample Collection and Processing**

All samples are collected on-site at our Stem Cell Collection Center. Samples are quickly processed in our on-site laboratory to achieve maximum viability and quality. Cryopreserved cells are frozen at -1°C/minute in a -80°C freezer, and then transferred to liquid nitrogen.

**Format**

Isolated cells are normally frozen in CryoStor™ CS10 (10% DMSO). We can also use freezing media as specified by the customer.

**Storage**

Cryopreserved cells should be maintained at -135°C or colder (in liquid nitrogen). The cells are warrantied for twelve months from the date of receipt if stored at -135°C or colder. Storage of cells at -80°C for less than one month should maintain cell viability but is not covered by the warranty.

**Thawing Instructions for Cell Products**

Refer to our “How to thaw StemExpress primary cells for optimal viability?” under our Frequently Asked Questions at stemexpress.com/faqs/ to access our online Thawing Protocol.

**Warning**

This product contains human tissue or other biological material and MUST be handled at Biosafety Level 2 or higher. All biological products should be treated as potentially infectious or contaminated material, even if infectious disease screening reports are negative. Follow universal precautions and wear appropriate personal protective equipment.
